SUMMARY

I am a creative and detail-driven Game Programmer skilled in Unity, C#, and Photon multiplayer systems. I design polished gameplay mechanics, build responsive UI/UX, and deliver optimized, high-quality player experiences. A fast learner and strong problem-solver, blending technical depth with artistic vision.

EXPERIENCE

- Jabsz Gaming Studios LLP**

August 2025 – December 2025

Game Developer Intern - Worked on gameplay systems and internal tools for a Unity-based multiplayer project using Photon Fusion. Improved bot behavior, enhanced UI elements for smoother player experience, and contributed to designing and implementing multiple in-game maps while adhering to project confidentiality.

EDUCATION

- SRM Institute of Science and Technology (SRMIST)**

May 2028

B.Tech in Computer Science – Specialization in Gaming Technology

GPA: 9.21/10

- Tagore Academy**

March 2024

12th ISC - Science

Percentage: 84%

CERTIFICATION

- Programming in JAVA**

NPTEL Certified | November 2025

Completed NPTEL certification in Java Programming, gaining proficiency in core Java concepts, object-oriented programming, data structures, and problem-solving techniques for software development.

- Unity Junior Programmer**

Unity Certified | January 2025

Validated core Unity development and C# scripting skills, including OOP, animation, game loop logic, physics systems, raycasting, and performance optimization.

PROJECTS

- **Merry Catcher Multiplayer**

Team Size: 1 member

Duration: 1 month

Built "Merry Catcher Multiplayer," a 3D arcade game using Unity, C#, and Photon PUN for multiplayer functionality. Designed and implemented a score-based gift-collection system, animated the main character in Blender, and ensured smooth cross-platform performance on PC, Android, and WebGL. Designed responsive controls, collectible mechanics, and an engaging gameplay loop.

- **Wither Woods**

Team Size: 1 member

Duration: 3 months

Developed a horror game using Unity and C#, creating a deeply atmospheric experience in a cursed, ever-changing forest. Designed and implemented puzzle and exploration systems with symbolic clues and narrative triggers, while integrating dynamic fear and environment-based tension mechanics to enhance player immersion.

- **Mr. M**

Team Size: 1 member

Duration: 3 months

Programmed a multi-mode 2D game using Unity and C#. Built four distinct gameplay modes—including a vertical jumping platformer, top-down bug-smash score hunt, magma-dodge survival arena, and a timed obstacle course with procedural generation. Created all 2D artwork, sound effects, and interface components to deliver a cohesive and engaging player experience.

SKILLS

• Unity • Blender 3D • C# • Java • Python • C • Git • GitHub • OOP

LANGUAGES

- English – Professional Proficiency
- Hindi – Native
- Bengali – Native

INTERESTS

- Drawing and Digital Art
- Level Design
- Storytelling and Narrative Development
